

Critiques

We're looking at some of the same charts as last class. This time we're going to do it from a **technical perspective** to see the way the graphics are actually assembled.

Chart Assembly

Using the material we've talked about so far in class, diagram the graphic in terms of marks and attributes.

- What kind of marks are being used? (There might be multiple!)
- What kind of data point does each mark represent?
- What attributes of the marks map to what elements of the data?
- Write out 3 example rows of data (or as close as you can get)

Assignments

Group 1

1. dear-data.com
2. www.nytimes.com
3. lab.interactivethings.com

Group 2

1. dear-data.com
2. iibawards-prod.s3.amazonaws.com
3. eagereyes.org

Group 3
